

# How does recovery fit into your Exchange migration?

There is no such thing as a perfect migration. Most migrations come with a lot of moving parts, and even in the best of circumstances, environmental failures and human error can cause data to become corrupt or lost, interrupting your carefully crafted migration plan. Make sure you're ready to quickly recover and keep your migration project on schedule.

## The importance of email

**99%** describe email as important and **mission critical** to corporate operations.

**81%** say email is the **most important** tool for employee communication.

## 3 reasons you need recovery software for a migration

- 1 Recover** missing or corrupted data quickly to keep the migration running on schedule.
- 2 Confirm** what's been migrated in the event of a server failure, network glitch, etc.
- 3 Create** and test the migration and disaster recovery plan for compliance purposes.

"... Waiting until you lose data is a bad time to start thinking about how to recover it."  
— Restructuring, Consolidating or Merging AD Domains, March 2013

When it comes to migration, high-fidelity data along with minimal data loss and downtime are crucial.

## Do you have plans to move entirely to cloud-based email services?

Most organizations who have only partially adopted cloud email want to deploy it to all their employees.

## Why did your company consider cloud-based email services?

## Does your organization face any challenges with email migration, recovery or reporting?

Recovery software addresses challenges that Exchange professionals face before and during migrations, and the software also continues to deliver value long after your migration is complete.

With the right recovery plan — and the right recovery solution — you can quickly recover from data loss or corruption during your migration. Even better, a good recovery solution will continue to deliver value long after your migration is complete, protecting your organization against data loss, downtime, loss of revenue and damage to its reputation.
