

# Data Protection Solutions

Enterprise-class backup & recovery, disaster recovery and long-term data retention

We all know your business continually faces risk of system outages, data loss and damage, and even man-made and natural disasters. That's why it's critical to keep your systems monitored, and ready to restore applications and data at a moment's notice after an unexpected event, with minimal disruption to customers and other stakeholders.

Quest data protection solutions take a holistic approach to business continuity by maximizing protection and availability of hybrid IT environments. They protect systems, applications and data wherever they live – on premises and in the cloud.

While comprehensive, our solutions help simplify backup and recovery to save you time and money. You get data protection, disaster recovery and long-term retention to address demanding business needs and expectations. With Quest Data Protection solutions, you can rest assured your business is protected.

## NETVAULT® PLUS

### Cloud ready data protection for hybrid data centers

NetVault Plus simplifies backup and recovery for large, complex IT environments. Protect all your applications and data on-premises, in remote offices and in the cloud.

NetVault Plus protects Windows and Linux servers along with Office 365, Exchange, SQL, SharePoint, Oracle, SAP, SAP HANA, DB2, MySQL and many other applications in physical, virtual and cloud environments. It supports a wide range of storage including SAN, NAS, Object Storage, VTL and tape.

NetVault Plus provides agent and agentless VM protection and can scale to protect thousands of virtual machines (VMs). NetVault delivers strong encryption and is FIPS certified for data security.

NetVault Plus also significantly reduces backup storage requirements and costs on-premises and in the cloud. Its global data deduplication cuts costs by more than 90%. You also get backup replication to achieve a 3-2-1 backup strategy by keeping an extra copy of data at a remote site or in the cloud. And its Cloud Tiering feature enables cost-effective long term data retention.

## QORESTOR®

### Cloud-connected storage, deduplication and replication

Connect to the cloud faster and more easily with QoreStor® software-defined storage, deduplication and replication. With QoreStor, no matter what backup software you use, you'll accelerate backup performance through protocol accelerators, reduce storage requirements and costs through content-aware, variable block deduplication, and replicate faster and safer to the cloud for disaster recovery.

QoreStor cloud tiering lets you leverage low-cost object storage for long-term data retention. You can lower data protection costs and maximize the return on your IT investment by leveraging virtually any storage hardware, backup software, virtualization platform or cloud provider. With QoreStor, you get cloud-based disaster recovery at your fingertips.

Altogether, you can count on QoreStor to reduce storage requirements by 20:1, increase data ingest speed to 20TB/Hr and make replication windows 10-15x smaller.

## ABOUT QUEST

Quest creates software solutions that make the benefits of new technology real in an increasingly complex IT landscape. From database and systems management, to Active Directory and Microsoft 365 migration and management, and cybersecurity resilience, Quest helps customers solve their next IT challenge now. Quest Software. Where next meets now.

## BENEFITS

- Protect all your applications and data on-premises, in remote offices and in the cloud — from one intuitive console
- Connect to the cloud faster and more easily with software-defined storage, deduplication and replication
- Back up and quickly recover applications and data in physical, virtual and cloud environments
- Tackle IT environment complexity of an ever-increasing mix of clouds, hypervisors, and applications

Quest data protection solutions help you protect your systems, applications and data wherever they live — on premises and in the cloud.
